TELE-VIEWING THE NEWS

By LEE LOUMOS

A year or so ago a survey showed that the average television set was turned on three or more hours a day . . . but a more recent survey showed that figure has doubled in many of today's TV homes. It's not at all uncommon for the kids to turn on the set as soon as they come home from school (or from the day's outing during summer). They'll stay there till dinner time . . . and right after dinner Dad pulls up his chair. He's often there right through the late show.

Since we spend so much time watching television these days, most of us are conscious of the simple rules to follow for eye comfort . . . like making sure there's some light on in the room so the contrast between picture brightness and the room's light isn't too great. Or making sure the kids don't sit right on top of the screen. And setting the contrast and brightness of the picture at a comfortable range.

There's one other factor that's important: nothing is harder on the eyes than a picture that's dim, unsteady, flickering or otherwise imperfect. The eyes follow every movement on the screen . . . so a poor picture is more than annoying . . . it's hard on the eyes.

So don't put up with the eye discomfort of a failing picture. Let our technicians service your set . . . to bring back a steady comfortable view.
